QUALITY

CNC Machined Framework: 90% of the machine parts are made of Japanese CNC machine for best compatibility and mechanical accuracy.

Aluminium Alloy Boom: Boom is processed and machined at the Italian CNC machining centre for high mechanical stability, rigidity and accuracy of the main boom.

High Precision: All the parts machined are of high precision, which results in less wear and tear, which in turn leads to very less service and long life of the machine.

HEATER

Conductive Heating: Advanced conductive heating with optimum media contact area provides an increase in outdoor life and no heat loss leading to negligible increase in room temperature.

MULTIPLE FEED SYSTEM

Media Pulling system: A special roller provided to ensure smooth opening of Media roll and avoid sticking, falling and wrapping of media in opposite direction.

Media roll can be inserted into the upper/lower Roller rod or can be supported on the 2 upper Rollers incase of Less space availability
